

POLI-TAPE®

HEAT TRANSFER VINYL

PRODUCT CATALOGUE 2024

DISCOVER THE OPPORTUNITIES FOR YOUR IDEAS!

What makes textile printing a success for you? Is it durable quality, fast production, vibrant designs and colors? Then why not take a look at our product catalogue.

POLI-TAPE® is the market-leading manufacturer of high-quality textile transfer films and for 30 years, has been producing them mainly in Germany.

So, what can you find in this catalogue? The product overview offers ideal solutions for every challenge that is as quick as it is foolproof. The entire range is set out in a clear and structured fashion. Which colors? Which procedure? Which finishes? We will show you at a glance.

Whatever your customer demands, you know you can choose from a huge variety of products and colors. What is more, we are continually bring out new product innovations that will help increase your business. Take POLI-FLEX® TURBO® for instance. This transfer film can be applied in seconds at a low temperature. This not only saves production time and protects delicate fabrics, but also saves energy, an important factor in our world today. Interested. Then what are you waiting for... read on!

POLI-FLEX® TURBO®

MOVING WITH THE CHANGING TIMES

With a huge range of 60 colors, in different finishes, **POLI-FLEX® TURBO®** ticks all the boxes on almost all fabrics and for all type of usages. Not only fast to apply and very easy to use, **TURBO®** films are helping to save energy and reduce your costs. While its popular use is on delicate fabrics, due to an application temperature of 130 °C at a press time of 5 seconds, **TURBO®** can also be applied at 160 °C in only 3 seconds. This would make a huge difference to your workflow. The end users will love the unique matt finish of the standard colors and the very long term and high-end quality textile decoration that will keep forever its initial color and properties, even when exposed to tough washing and drying conditions.

SAVES
TIME &
ENERGY!

ENERGY SAVING

FAST TRANSFER: 5 SECONDS

LOW TEMPERATURE: 130 °C

ANTI-SUBLIMATION PROPERTIES

CHARACTERISTICS

- ▶ Excellent cutting and weeding
- ▶ Liner with high adhesion for safe positioning
- ▶ 95 µm for very good opacity
- ▶ No scorch or press marks
- ▶ Soft, pleasant textile touch
- ▶ Good stretch properties
- ▶ 60 colors / 4 finishes
- ▶ Several layers are stackable
- ▶ Excellent wash resistance at 60 °C
- ▶ Integrates perfectly in your workflow whatever the temperature or handling process

* We recommend to test for suitability.

WHY IS TURBO® THE BEST SOLUTION FOR ALL TYPES OF HEAT TRANSFER PROJECTS?

YOU HAVE A BIGGER JOB AND/OR JUST NO TIME?

POLI-FLEX® TURBO® is easily and fast to weed. And... within a minute with a double-plate press, you can apply **12 designs**, 3 times more than with classic flex. Over a day, these are a lot of garments you can customise!

YOUR PROJECT INVOLVES MANY DIFFERENT FABRICS?

POLI-FLEX® TURBO® is suitable for most fabrics, from standard to more temperature sensitive or sublimated fabrics. With just **one product for all**, you rationalise your stocks, make sure you have the same color for all your designs, and you only have one setting to remember.

YOU ARE CONCERNED ABOUT YOUR ENERGY CONSUMPTION?

It is just better to work at 130 °C with **POLI-FLEX® TURBO®**, otherwise you would spend respectively up to 35% and 50% more energy for heating up and maintaining the press at temperature.

Save energy and money!

WANT TO KNOW MORE ABOUT ENERGY SAVING WITH POLI-FLEX® TURBO®? SCAN THIS CODE TO LEARN MORE!

YOU ARE CONCERNED ABOUT THE EFFICIENCY OF YOUR TEAM AND PROCESS?

With **POLI-FLEX® TURBO®** you always have a suitable film, the safety of using the right settings, a safe and precise positioning of the designs and a faster workflow.

YOU HAVE TO WORK WITH TEMPERATURE SENSITIVE FABRICS?

POLI-FLEX® TURBO® is equipped with a very fastmelting adhesive that will **strongly bond in a couple of seconds at low temperature**. Therewith you prevent overheating and damaging the fabric as well as press marks.

TUBITHERM® FLOCK

FOR THE VELVET TOUCH

Flock is still trendy, even if not used as some years ago. Today, when producing hoodies, jumpers or jackets, it is the preferred material in combination with PU-flex or with embroidery. It gives a nice texture and a unique feel to your textile decoration. **TUBITHERM®** is 100% manufactured in our German factory, enabling us to produce an ideal product with a denser layer of fine fibres for an exceptional velvety finish. Try it and love it!

SUPER VELVETY TOUCH

VERY BRIGHT COLOR

VERY DENSE COATING

NO FLUFF ON THE FLOCK

CHARACTERISTICS

- ▶ Easy cutting
- ▶ Excellent weeding
- ▶ High end quality rayon and polyamide thin fibers
- ▶ Special Blockout Flock also available for sublimated polyester fabrics
- ▶ Also available in two printable versions

POLI-FLEX® BLOCKOUT SOFT

SAY GOODBYE TO INK MIGRATION

It is very technical, but let's try to explain it in simple words: the fabric of most sports shirts are printed with sublimated inks.

These are highly reactive to heat and tend to migrate through flex films, especially during the pressing process. **POLI-FLEX® BLOCKOUT SOFT** with its double protection built in the flex film – a unique blocking layer and a low temperature hotmelt with perfect anchorage on the textile – is the very best defence you can find to prevent this issue.

**CREATED FOR
SUBLIMATED TEXTILES**

UNIQUE ADDITIONAL LAYER

FAST TRANSFER: 5 SECONDS

**DOUBLE PROTECTION
FOR PERFECT BLOCKOUT**

CHARACTERISTICS

- ▶ Perfect cutting and excellent weeding properties
- ▶ Liner with high adhesion for safe positioning
- ▶ Prevents scorching marks
- ▶ Color range matching the other CAD ranges which is ideal for multi-garment projects
- ▶ Perfect washability up to 60 °C
- ▶ Also available as a printable film, see page 30

TRICKS AND TIPS - BLOCKOUT OR TURBO®

A simple test to make the right decision: Press a clear polyester film (e.g. liner leftovers of your flex film) on your sublimated fabric for 15 seconds at 160 °C. Lay the polyester on a white substrate.

For high discoloration use BLOCKOUT SOFT. For only slight discoloration use TURBO®. BLOCKOUT films are slightly thicker at 125 µm and less stretchable than TURBO® films. This is valid for both POLI-FLEX® and TURBO®-PRINT ranges.

POLI-FLEX® NYLON

FOR SPECIAL MATERIALS

Raincoats, impregnated caps, umbrellas, bath suits, so called impregnated fabrics... When heat pressing onto such difficult fabrics, there is no guaranteed of success due to the multitude of different chemical processes used in their production.

Our advice... Make a test to evaluate the suitability of your fabric with Heat Transfer Vinyls. If your textile is water repellent – i.e. hydrophobic - **POLI-FLEX® NYLON** is your best chance to succeed!

**BEST QUALITY FOR
IMPREGNATED FABRICS**

**SPECIAL FOR
HYDROPHOBIC FABRICS**

**SUITABLE FOR MOST
DIFFICULT FABRICS**

SPECIAL FOR NYLON

CHARACTERISTICS

- ▶ Color range matching the other CAD ranges which is ideal for multi-garment projects
- ▶ Also available as a reflective film for high-visibility
- ▶ Perfect cutting and weeding properties
- ▶ Liner with high adhesion for accurate positioning
- ▶ Special press-settings: 150 °C, pre-pressing 4 sec., re-pressing 10 sec. after removing the liner luke warm

TIPS AND TRICKS

THE WATER DROP TEST

Has your textile a water-resistant impregnation? Just test it!

Place a water drop on the fabric, and see how fast it gets absorbed. If the droplet just stays on the surface, or takes longer to get absorbed by the fabric, POLI-FLEX® NYLON will be required.

Suitable for:

HYDROPHOBIC FABRICS • IMPREGNATED FABRICS • NYLON AND DIFFICULT FABRICS

POLI-FLEX® REFLEX®

WHEN VISIBILITY IS KEY

Health and safety regulations are very strict when it comes to work on roads, at night or in dark areas. Visibility is key; workwear equipped with **EN 20471 certified reflective film** is mandatory.

POLI-FLEX® REFLEX® offers two certified products, including a 3M reflective based flex. The colored reflective range is perfect for customisation with additional visibility especially on sports or kids wear as well as on satchels or bags.

POLI-FLEX® FLAME RETARDANT

CHOOSE FIRE PROTECTION

All details are important when it comes to health and safety of people. Make sure the flex film used for the lettering and logos on the special jackets and suits are flame retardant and will not compromise all efforts put into the flame resistance of the fabrics.

It may be company logos for workers on an oil platform, sponsor logos for bikers or race pilots, letterings with firefighters' brigade name.

Don not play with their safety:

use **POLI-FLEX® FLAME RETARDANT**.

FLAME RETARDANT

(ACCORDING TO DIN EN ISO 4589-2)

PERFECT FOR RACING SUITS

IDEAL FOR FIREMEN SUITS

MADE FOR WORKWEAR

CHARACTERISTICS

- ▶ Complies with the DIN EN ISO 4589-2 standard.
- ▶ Machine wash up to 60 °C
- ▶ Can be used on textile decoration elements in public areas
- ▶ Also available as a printable version
- ▶ More colors on demand
- ▶ Liner with high adhesion for accurate positioning

POLI-MELT®

EVERYTHING CAN BE HEAT TRANSFERRED

Flex films are not enough? Do you want to decorate your substrate with leather, hot stamping foils, or other fabrics? May be also add labels and tags, embroideries etc? Or would you like to bond two substrates together? **POLI-MELT®** makes all this possible. **POLI-MELT®** is a layer of hotmelt adhesive that will bond two substrates very firmly together only with the use of your heat press. Very popular amongst the crafters!

LAYERING FLEX FILMS

HOW TO COMBINE POLI-TAPE® CAD FLEX AND FLOCK FILMS

BLOCKOUT SOFT, NYLON, REFLEX® NYLON would never be pressed on top of other FLEX films, this wouldn't be a realistic application.

STRETCH should not be layered as it would reduce the stretchability.

TUBITHERM®, PEARL GLITTER and REFLEX® should never be layered under other flex or flock films. **MULTILAYERING OF CARBON** will need slightly higher pressure and 3 seconds longer pressing depending on the fabric

POLI-FLEX® FILMS LAYERING WITHOUT LIMITS

- ▶ TURBO® - Standard colors
- ▶ PREMIUM - Standard colors
- ▶ BLOCKOUT SOFT - Standard colors
- ▶ DIMENSION
- ▶ CARBON

PRINTABLE FILMS

PERFECT CHOICE FOR EVERY OCCASION

POLI-TAPE® offers a very extensive range of printable flex films. Our aim is simple: We want to have a solution for every project, for every fabric. But we also want to keep it very simple. Our go-to product would be the **TURBO® PRINT 4046 NON-ADHESIVE** as this film covers the vast majority of applications. Of course, if you prefer a printable film with the more standard adhesive - heat pressing 160 °C/15 seconds - then we have solutions here too. But that is not all, our range covers blackout films, thinner and transparent film, plus metallic films. All these have either adhesive or non-adhesive liners and can be used with all ink types. Discover the extensive range and the benefits of each product.

**OPTIONS FOR ALL INK SYSTEMS:
SOLVENT, ECO-SOLVENT, LATEX,
UV-CURABLE, DYE, PIGMENT,
SUBLIMATION**

**PU, PVC/PU, FABRIC
OR FLOCK OPTIONS**

FROM 50 TO 560 µm

**HIGH PRINT RESOLUTION
FOR DEEP COLORS**

PERFECT INK ANCHORAGE

**EXCELLENT LONG-TERM
WASHABILITY**

**MATT, GLOSSY, CLEAR,
METALLIC FINISHES**

WHITE FILMS

TURBO® PRINT

TURBO® PRINT is not only an ideal printable flex film, offering a huge range of benefits to the applier during the handling and application on the fabric, but also ensuring a long-term high-end quality textile decoration to the end user.

3.0 BAR

4036 MATT

The benchmark in printable flex films. It is 100% made of polyurethane, and is equipped with its unique POLI-TAPE® adhesive liner.

BENEFITS FOR PRODUCTION

- ▶ Excellent cutting and weeding
- ▶ Fast and low temp. application
- ▶ From 3 sec./160 °C to 5 sec./130 °C
- ▶ Energy saving
- ▶ Very versatile in usage
- ▶ Anti-sublimation properties
- ▶ Suitable for almost all textiles: Cotton, polyester, Poly-Cotton, poly/acrylic, most nylons
- ▶ Can be implemented in the workflow without changing the press settings

BENEFITS FOR THE END USER

- ▶ Unique matt finish
- ▶ OEKO TEX CLASS 1 & VEGAN certified
- ▶ Excellent opacity
- ▶ Excellent wash resistance at 60 °C
- ▶ Made in Germany

Certified for
HP Latex Inks

4046 NON ADHESIVE

Like 4036 but with a non-adhesive liner. It facilitates production and transfer. Also perfect with intricate designs. Simply reverse weed on Transfer Tack 870.

Certified for
HP Latex Inks

NEW

REVERSE WEEDING?

Place Transfer Tack 870 over the entire unweeded design, press firmly with a squeegee. Flip it over. Then remove the PET Liner of 4046 and remove the excess flex material. Done!

The reverse weeding also works with all printable films with non-adhesive liner.

4037 UV

Like 4036 but specifically developed for UV-printers.

Solvent and Eco-solvent inks

Latex inks

UV curing inks

PERFECT CHOICE FOR EVERY OCCASION

WHITE FILMS

TURBO® PRINT

4038 H₂O

Same TURBO® adhesive as 4036 but with a water-based PU for an eco-friendlier process. Excellent lay flat properties, simple design can be transferred without Transfer Tape.

4039 GO GREEN

Like 4038 but with a backing liner made of paper for an even more eco-friendly process. Excellent lay flat properties, simple designs can be transferred without Transfer Tape.

TURBO® PRINT ALSO FOR BLOCKOUT

The TURBO® adhesive is exceptionally efficient and versatile. It is high-end quality features enable a perfect long-term bond to sublimated fabrics with only 5 seconds at 130 °C.

4010-S BLOCKOUT

Sublimated fabrics are a daily challenge for the customization of most sportswear. They are also getting more popular for work and functional wear, furniture or industrial fabrics, where flex film needs to be added after the fabric has been printed.

4010-S BLOCKOUT is based on the TURBO®-PRINT 4036 film. At 120 µm the film is thicker and therefore slightly less stretchy. It offers double protection with an additional blackout interlayer that resists even the worst discoloration from sublimation inks. The best solution for perfect long-term results.

4010 S BLOCKOUT

STANDARD FILM

WHITE FILMS

ULTIMATE PRINT

Before the new era of TURBO® technology, applying at 160 °C / 15 seconds was the standard for flex materials and printable flex films. This very popular range is still used worldwide with a gloss finish that enhances the POLI-TAPE® printable range.

160 °C

15 SEC

3.0 BAR

4030 SOFT MATT

So soft that it feels thinner than it is.

BENEFITS FOR PRODUCTION

- ▶ Excellent cutting and weeding, reverse weeding on Transfer Tape for thinnest designs
- ▶ Unique top coat for beautiful deep colors
- ▶ Non-adhesive liner for an easy handling
- ▶ Suitable for cotton, polyester, Poly-Cotton, poly/acrylic

BENEFITS FOR THE END USER

- ▶ Unique matt finish
- ▶ Pleasant thin and soft touch
- ▶ OEKO TEX CLASS 1 & VEGAN certified
- ▶ Excellent opacity
- ▶ Excellent wash resistance at 80 °C
- ▶ Made in Germany

Certified for
HP Latex Inks

4031 SOFT GLOSS

Like 4030 but with a glossy finish

4032 SOFT MATT ADHESIVE

Like 4030 but with an adhesive liner.

Especially developed for jobs with thin or intricated lines to be weeded

4033 SUPERSOFT MATT

Like 4030 but with an even thinner 50 µm film for even more flexibility

SPECIAL FILMS

SPECIAL SOLUTIONS FOR ALL NEEDS

Working with Heat Transfer Vinyls is not so easy. Next to the many different fabrics that require specific adhesive solutions, there are also special requirements from end-users. These could include flame retardant properties or metallic finishes. Here are the solutions we can offer.

 160 °C

 15 SEC

 2.5 - 3.0 BAR

4025 ULTIMATE PRINT MATT

This 120 µm PU/PVC film with its semi-matt finish is ideal for simple one-piece designs as it can be transferred without Tape and has perfect lay-flat properties.

4670 FR FLAME RETARDANT

This flex is equipped with flame retardant components for extra safety. It is a unique solution for firemen, bikers and racing pilots or where work and leisure-wear need that additional safety level.

4665 METALLIC

Add a shimmering touch to your printable flex film with this metallized polyurethane flex film. Even when printed – depending on the ink load – this film has an excellent shine.

4035 ULTIMATE PRINT NYLON

This film's adhesive was developed specifically for hydrophobic, impregnated nylons and difficult textiles. It has very good opacity with its 100 µm thickness. The transfer needs to be done in a 2 steps process to guarantee a better bond to the fabric. All details are on the technical data sheet.

 150 °C

 10 SEC
PRE-PRESSING
4 SEC

 2.0 BAR

PRINTABLE FLOCK

5905 SOLVENT FLOCK

Give your print a velvety touch with this impregnated viscose rayon flock. It is printable with solvent and eco-solvent inks. The 560 µm Heat Transfer Flock will add body and texture to your designs, as well as a very soft and velvety finish.

 160 °C

 15 SEC

 2.5 - 3.0 BAR

TRANSPARENT FILMS

WHEN WEEDING IS NOT AN OPTION

Sometimes a design can not be weeded: too intricate or too much to weed. Our clear printable films will be your solution! Simply mirror print on the adhesive side, cut a simple shape around the design and apply it with a heat press. The flex film protects the print. You don't even need Transfer Tape in the process.

 160 °C  15 SEC  2.5 - 3.0 BAR

4034 ULTIMATE PRINT TRANSPARENT SOFT

With an extremely thin PU film of only 50 µm for extra flexibility, this printable film is the best-seller of our transparent range. The carrier is used to transfer the film onto the fabric and therefore a transfer tape is not required. Try it and love it!

4655 TRANSPARENT

Same technology as 4034 with a thicker 75 µm PU film and a high wash resistance up to 60 °C. Both have a non-adhesive PET-liner for direct transfer.

4625 TRANSPARENT

Like 4655 but with a paper liner.

DYE AND PIGMENT INKS

4600 AND 4605

Heat Transfer designs can be produced even on desktop and large format water-based printers. This 160 µm PU-film has a unique top-coat that will enable the flex film to withstand washing up to 60 °C. Thanks to its thickness, simple designs can be transferred without transfer tape.

TRANSFER TAPES

SO EASY AND YET INDISPENSABLE FOR THE PERFECT RESULT

POLI-TACK transfer tapes are designed for quick and dimensionally stable thermal transfer of printed and weeded textile transfers. **POLI-TACK** allows an exact positioning and bonding of all types of motifs and designs. All **POLI-TACK** products are polyester films coated with a special high temperature resistant adhesive.

**STRONG ADHESION
FOR SAFE POSITIONING**

LEAVES NO RESIDUES

TRANSFER TAPE WITH LINER

POLI-TACK 870 UNIVERSAL

MEDIUM TACK

Newest high-quality transfer tape for printed flex films. It will suit most applications and guarantees exact and safe positioning of your design before pressing. The special acrylic adhesive is designed for perfect removal from the flex film after the pressing process. Depending on your personal preference or when applying intricate or very big designs, you may want to consider either the high or low-tack alternative tapes.

OUR
ALL-ROUND
SOLUTION

POLI-TACK 850

HIGH TACK

140 µm clear Polyester film with **HIGH TACK** adhesive
– 0,90 N/cm – for fine and intricate designs.

POLI-TACK 854

MEDIUM TACK

120 µm clear Polyester film with **MEDIUM TACK** adhesive
– 0,60 N/cm – for standard flex work.

POLI-TACK 853

LOW TACK

120 µm clear Polyester film with **LOW TACK** adhesive
– 0,30 N/cm – for bigger designs.

POSITIONING OF THERMAL TRANSFERS

THERMO-TAPE 840T

HIGH TACK

This self-adhesive transparent tape with a high tack adhesive has an excellent resistance to chemicals, ageing, humidity and of course high temperature. Available in 9, 12, 19 and 25 mm width, it is ideal for positioning Flock- and Flex-products with non-adhesive liners before and during thermal transfer. After usage it perfectly remove without residue.

CRAFT PRODUCT-RANGE

DO IT YOURSELF ON THE RISE — SPECIAL CRAFT FORMATS

Crafting and DIY have become increasingly more popular and important. Fashion products, team or workwear, sports textiles, bags, hats, accessories, even wood and paper - the variety of applications onto these items are limitless for crafters. We are producing popular products that give crafters the opportunity to turn their ideas into reality. For this purpose, our products come in different formats specifically for the craft market. A4 sheets, large format rolls (e.g. 25 metres length) and not forgetting our very stylish Craft Box. We want to inspire our customers and craft community with everything under our new slogan:
FOR YOUR COLORFUL WORLD.

ROLLS

- ▶ Width: 305 mm
- ▶ Length: 25 m

CRAFT BOX

- ▶ Width: 305 mm
- ▶ Length: 61 or 122 cm
- ▶ Reduce time and costs for converting
- ▶ Labelling on the box, ready to sell

A4 SHEETS

- ▶ Packed by 50 or 100 sheets
